

July 2010

To all Merchant Service Providers:

This letter is to attest that Wintix Box Office Accounting Software version 5 does not store the credit card number, any swiped data or cvv2 number as per PCI compliance regulations. Wintix collects information for charging and sends it directly to the secure server at the MerchantPlus and/or Authorize.net gateway. Information kept is the transaction ID, and the last four digits of the credit card account number.

This statement is predicated on the client using the software according to the PCI specifications and guidelines.

Sincerely,

Diane Rowe
General Manager
